FUNKTIONER

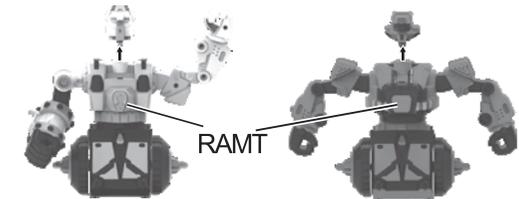

Episke kamplyde skaber en intens kampstemning. Robotten er udstyret med passende kampvåben, som nemt kan fjernes for at øge forsvaret og gøre kampen sjovere.

Med et stabilt og solidt 360-graders roterende taljedesign kan du hurtigt dreje acceleratoren under rotationen for at øge rotationshastigheden. Dette opbygger mere rotationskraft og forbedrer dermed kampkraften.

Hvis en robot rammer den anden på brystknappen under kampen, vil hovedet springe op, og robotten vil miste sin vitalitet. For at genaktivere den skal hovedet sættes på igen.

Tænd for robotten og fjernbetjeningen. Tryk derefter på B1 + C2 + A2 samtidig. (At trykke på de modsatte knapper vil have samme effekt.) Robotten vil svinge og afgive en sjov, udfordrende lyd, hvilket gør legen mere spændende. (Se billeder 9 & 10.)

Når produktet er tændt, afspilles en lydpåmindelse hvert 5. minut.
