

HOW TO INSTALL YOUR DELI TIRE TUBES

1. Before fitting make sure the rim is the right size for the tire and tube. Inspect the rim condition (fig.1).
2. Inspect the rim band or rim tape. An appropriate rimpaper or rim band must completely and securely cover all spoke holes (fig.2).
3. Fit the first bead into the well of the rim (fig.3).
4. Slightly inflate the tube to give it shape and introduce it into the tire, starting with the valve (fig.4).
5. To install the second bead, starting opposite the valve mount the other tire side into the rim. Ensure the tube is not pinched between the bead and the rim (fig.5).
6. The valve should be in an upright position.
7. Center the tire before inflating it to the recommended pressure indicated on the tire sidewall.
8. Adjust the inflation pressure by using a pressure gauge.
